# Subject Index of Volume 41

Aggregate model
an aggregate model for the positive electrode system of the lead/acid cell
I. Model development, 25
II. Simulation results, 39
Alkaline cells
the analysis of voltage fluctuations for the characterization of rechargeable alkaline manganese dioxide–zinc cells, 321

Cathode material
positive electrode for galvanic cells prepared by anodization of $CrO_3$–graphite intercalation compounds in aqueous sulfuric acid, 263
Cell reversals
modeling the occurrences of cell reversals in long strings of lead/acid cells, 277
Charge/discharge reactions
effect of metal-sulfide additives on charge/discharge reactions of the alkaline iron electrode, 99
Charging state
a simple approach to the determination of the charging state of photovoltaic-powered storage batteries, 65
Chromium oxide
positive electrode for galvanic cells prepared by anodization of $CrO_3$–graphite intercalation compounds in aqueous sulfuric acid, 263
Cobalt hydroxide
cyclic voltammetric studies of electrodeposited solid solution and composite oxide/hydroxide electrodes in 1 M KOH: the $Co(OH)_2$–$Ni(OH)_2$–$MnO_2$ system, 223
Cold start-up
design for the cold start-up of a man-portable fuel cell and hydrogen storage system, 335
Composite oxide/hydroxide electrodes
cyclic voltammetric studies of electrodeposited solid solution and composite oxide/hydroxide electrodes in 1 M KOH: the $Co(OH)_2$–$Ni(OH)_2$–$MnO_2$ system, 223
Conductivities
conductivities of 1,2-dimethoxyethane or 1,2-dimethoxyethane-related solutions of lithium salts, 77
Cyclic voltammetric studies
cyclic voltammetric studies of electrodeposited solid solution and composite oxide/hydroxide electrodes in 1 M KOH: the $Co(OH)_2$–$Ni(OH)_2$–$MnO_2$ system, 223
Cyclic voltammetry
performance characteristics of a pilot sea-water activated battery with Pb/$PbCl_2$ cathodes, prepared by cyclic voltammetry, 55

1,2-Dimethoxyethane
conductivities of 1,2-dimethoxyethane or 1,2-dimethoxyethane-related solutions of lithium salts, 77

Effective transport numbers
comparative determination of effective transport numbers in solid lithium electrolytes, 253
Energy analysis
review of an energy and exergy analysis of a fuel cell system, 239
Exergy analysis
review of an energy and exergy analysis of a fuel cell system, 239

Fuel cell system
review of an energy and exergy analysis of a fuel cell system, 239

Graphite oxide
positive electrode for galvanic cells prepared by anodization of $CrO_3$–graphite intercalation compounds in aqueous sulfuric acid, 263

Hydrogen storage system
design for the cold start-up of a man-portable fuel cell and hydrogen storage system, 335

Iron electrode
effect of metal-sulfide additives on charge/discharge reactions of the alkaline iron electrode, 99

Lead/acid battery(ies)
mechanism of $PbO_2$ formation in lead/acid battery positive plates, 231
modeling the occurrences of cell reversals in long strings of lead/acid cells, 277
Lead/acid battery technology
aspects of lead/acid battery technology
1. Pastes and paste mixing, 107
2. Tubular positive plates, 163
3. Plate curing, 185
4. Plate formation, 195
Lead/acid cell
three-elemental models for the positive electrode of the lead/acid cell
I. Model development, 1
II. Simulation results, 13
an aggregate model for the positive electrode system of the lead/acid cell
I. Model development, 25
II. Simulation results, 39
Lead cathodes
performance characteristics of a pilot sea-water activated battery with Pb/$PbCl_2$ cathodes, prepared by cyclic voltammetry, 55
Lead dioxide formation
mechanism of $PbO_2$ formation in lead/acid battery positive plates, 231
Lithium battery(ies)
rechargeable lithium battery with spinel-related $MnO_2$
II. Optimization of the $LiMn_2O_4$ synthesis conditions, 305
rechargeable $Li/LiMn_2O_4$ batteries with a polymeric solid electrolyte, 315
Lithium cells
preliminary evaluation of rechargeable lithium cells for a totally-implantable ventricular assist device, 87
single- and double-ion type cross-linked polysiloxane solid electrolytes for lithium cells, 291
Lithium electrolytes
comparative determination of effective transport numbers in solid lithium electrolytes, 253
Lithium salts
conductivities of 1,2-dimethoxyethane or 1,2-dimethoxyethane-related solutions of lithium salts, 77

Magnesium–iodine battery(ies)
problems of manufacturing a magnesium–iodine battery, 299
Manganese dioxide
the analysis of voltage fluctuations for the characterization of rechargeable alkaline manganese dioxide–zinc cells, 321
Manganese hydroxide
cyclic voltammetric studies of electrodeposited solid solution and composite oxide/hydroxide electrodes in 1 M KOH: the $Co(OH)_2$–$Ni(OH)_2$–$MnO_2$ system, 223
Metal-sulfide additives
effect of metal-sulfide additives on charge/discharge reactions of the alkaline iron electrode, 99
Model development
three-elemental models for the positive electrode of the lead/acid cell
I. Model development, 1
an aggregate model for the positive electrode system of the lead/acid cell
I. Model development, 25

Nickel hydroxide
cyclic voltammetric studies of electrodeposited solid solution and composite oxide/hydroxide electrodes in 1 M KOH: the $Co(OH)_2$–$Ni(OH)_2$–$MnO_2$ system, 223

Pastes
aspects of lead/acid battery technology
I. Pastes and paste mixing, 107
Performance characteristics
performance characteristics of a pilot sea-water activated battery with Pb/$PbCl_2$ cathodes, prepared by cyclic voltammetry, 55
Photovoltaic-powered storage batteries
a simple approach to the determination of the charging state of photovoltaic-powered storage batteries, 65
Plate curing
aspects of lead/acid battery technology
3. Plate curing, 185
Plate formation
aspects of lead/acid battery technology
4. Plate formation, 195

Polymeric solid electrolyte
rechargeable Li/$LiMn_2O_4$ batteries with a polymeric solid electrolyte, 315
Polysiloxane solid electrolyte
single- and double-ion type cross-linked polysiloxane solid electrolytes for lithium cells, 291
Portable fuel cell
design for the cold start-up of a man-portable fuel cell and hydrogen storage system, 335
Positive electrode
three-elemental models for the positive electrode of the lead/acid cell
I. Model development, 1
II. Simulation results, 13
Positive electrode system
an aggregate model for the positive electrode system of the lead/acid cell
I. Model development, 25
II. Simulation results, 39
Positive plates
mechanism of $PbO_2$ formation in lead/acid battery positive plates, 231

Sea-water activated battery
performance characteristics of a pilot sea-water activated battery with Pb/$PbCl_2$ cathodes, prepared by cyclic voltammetry, 55
Simulation results
three-elemental models for the positive electrode of the lead/acid cell
II. Simulation results, 13
an aggregate model of the positive electrode system of the lead/acid cell
II. Simulation results, 39
Spinel-related $MnO_2$
rechargeable lithium battery with spinel-related $MnO_2$
II. Optimization of the $LiMn_2O_4$ synthesis conditions, 305

Three-elemental models
three-elemental models for the positive electrode of the lead/acid cell
I. Model development, 1
II. Simulation results, 13
Tubular positive plates
aspects of lead/acid battery technology
2. Tubular positive plates, 163

Ventricular assist device
preliminary evaluation of rechargeable lithium cells for a totally-implantable ventricular assist device, 87
Voltage fluctuations
the analysis of voltage fluctuations for the characterization of rechargeable alkaline manganese dioxide–zinc cells, 321

Zinc
the analysis of voltage fluctuations for the characterization of rechargeable alkaline manganese dioxide–zinc cells, 321
